

So how can you use this national currency in different countries?

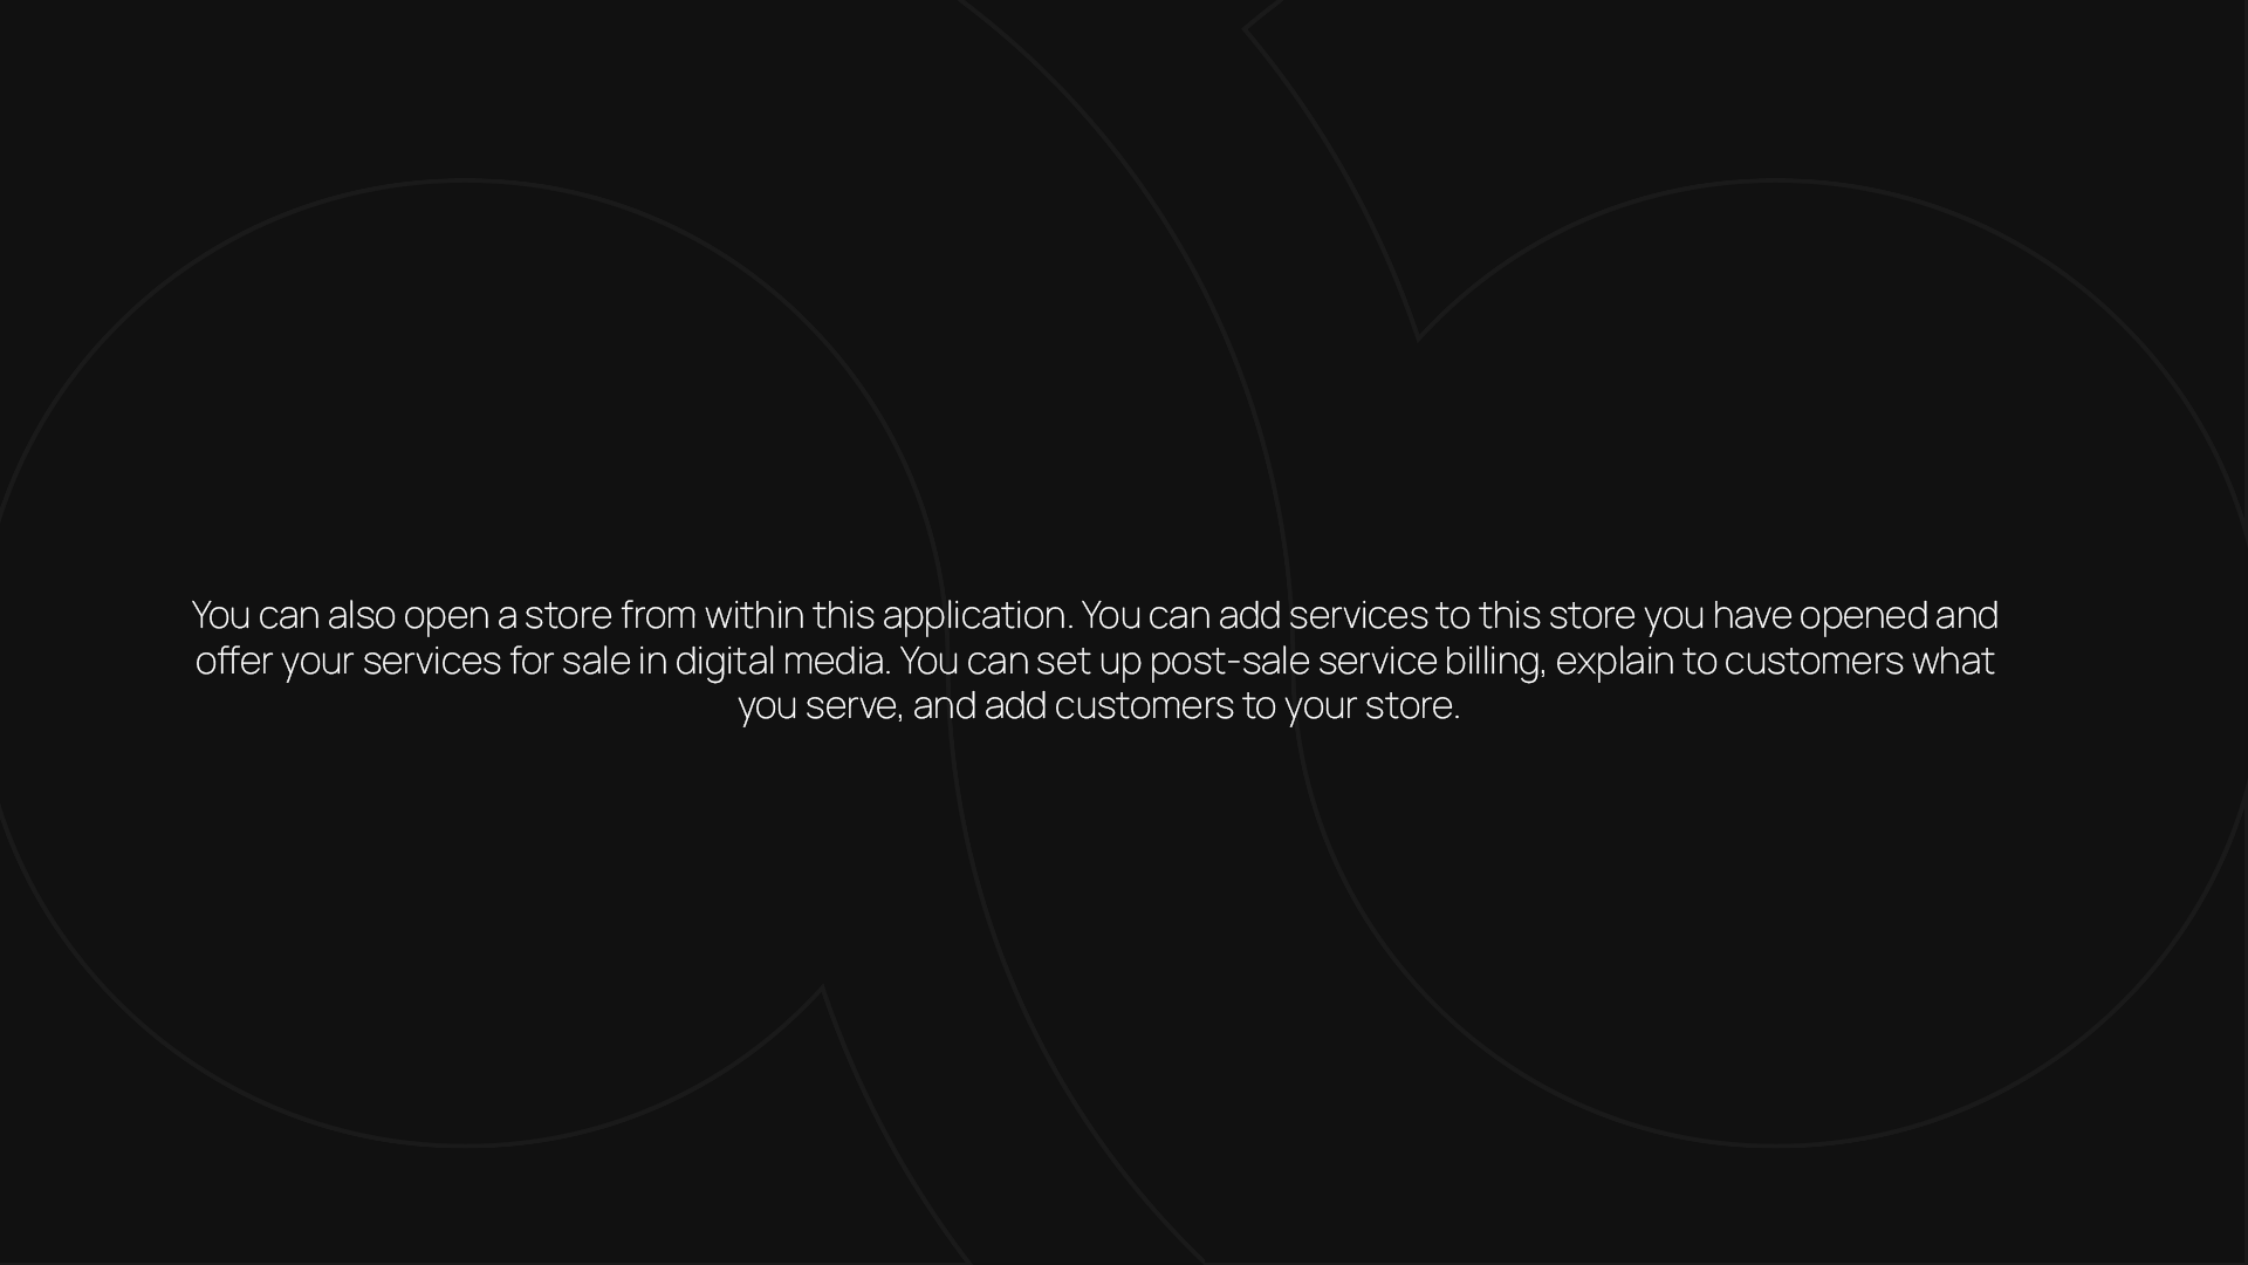

Let's say you are going to a different country and you need money in that country. You can open Carve and convert your existing CV to the currency of that country and get your money in cash from the exchange office. In addition, if there are Carve services in this country, you can benefit from them with a single QR code and make payments in one go without any payment steps.

The background is dark gray with several large, overlapping, light gray circles. A thin, light gray arrow points from the top center towards the bottom center, passing through the center of the text.

Carve systems are a system that connects countries and can make money transfers smoothly.
You can easily make a deposit and check transaction or transfer between countries.

All money can be managed in one common point.
In this way, you can use any currency you want at a
different payment point in a different country. All you
have to do will be to link your wallets to the
application.

The background is a solid dark gray. It features several large, thin-lined geometric shapes that overlap each other. On the left, there is a large circle. To its right, there is a large triangle pointing downwards. Further to the right, there is another large circle. These shapes are rendered in a slightly lighter shade of gray than the background, creating a subtle, modern aesthetic.

You can also open a store from within this application. You can add services to this store you have opened and offer your services for sale in digital media. You can set up post-sale service billing, explain to customers what you serve, and add customers to your store.
